Painted Timber Cladding

Q-Clad timber cladding is made from slow grown Scandinavian whitewood (Picea Abies).
It is kiln dried to a specific moisture content suitable for external cladding use and preservative treated to UC3C providing a 15 year warranty against fungal decay and insect attack (the warranty does not apply to the life of the paint coating).

Please enquire with your retailer if Chain of Custody is required.

Fine sawn finish provides great paint adhesion and great look.

Factory applied paint soon after timber processing provides best possible paint performance and finish for timber.

Rebated version provides quick and accurate fitting.

Q-Clad products have CladMark accreditation independently assessed by the Timber Decking & Cladding Association (TDCA).

Q-Clad pre-painted exterior timber cladding products can be used in most vertical exterior cladding situations.
They are designed to save time and provide a high quality painted finish that retains a natural grain appearance only timber can provide.

Factory applied paint provides the best possible paint
The products are essentially designed to be over-painted but this is your choice and not a requirement of the warranty.

We would recommend over-painting to hide the heads of fixings or any minor damage that may be incurred during fitting.

The white product is designed for over-painting with the colour of your choice.

We strive to provide conditions for the best possible paint adhesion.
The paint is a waterborne microporous system by Teknos, a well renowned Finnish commercial paint manufacturer.
The more coats applied to the cladding means the greater paint 'build' and the greater the 'build' the better the finish and resistance to weathering.

For over-painting we recommend the use of Bedec Barn Paints by Bedec Ltd (satin finish is the closest match) or similar high quality waterborne microporous systems.

Q-Clad Painted Featheredge-Black UKCA

Painted Black Featheredge Cladding (one coat)
