

THERMORY®

DURABLE THERMALLY MODIFIED WOOD

Coated thermally modified spruce.

Thermory's thermally modified spruce is a softwood solution that offers exceptional rot resistance and longevity. Our thermo spruce cladding range gives your facade a naturally charming appearance with beautiful visible knots.

With its low moisture absorption, thermo spruce twists, cups and bends less than untreated wood in outdoor use, with less shrinkage and expansion.

Vivid Black is thermally modified cladding finished with a fully opaque, water-based paint. Maintenance is typically needed every 7-10 years, depending on climate.

Vivid Silvered delivers a grey, pre-weathered look from day one. It stays beautiful for decades with no maintenance coating—just occasional cleaning. Over time, the subtle grey finish wears naturally, revealing the wood beneath and settling into an authentic, natural grey.

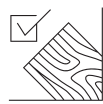

Thermally Modified
Thermal modification gives wood the highest durability class.

Durable
Exceptional rot resistance and longevity

Stable
Thermally modified wood is more dimensionally stable in changing weather conditions

Quality Materials
Our customers can always rely on the consistent quality

Sustainable
Thermal modification is a chemical-free treatment.

Low maintenance
Weather-resistant façade with minimal maintenance
